

DWA_03.5 Knowledge Check_DWA3.2

1. User story(ies) in Gherkin syntax for the "+" button.

1. Feature: Increment Tally Count with "+" Button

As a user, I want to be able to increment the tally count
So that I can keep track of occurrences or quantities

Scenario: Increment tally count by one

Given I have a tally count

And the current count is 1

When I click on the "+" button once

Then the tally count should increase to 2

2. Feature: Multiple Incrementations with "+" Button

As a user I want to be able to increment the tally count multiple times
So that I can accurately track occurrences or quantities

Scenario: Increment tally count multiple times

Given I have a tally count

And the current count is 2

When I click on the "+" button 5 times

Then the tally count should increase to 7

3. Feature: Maximum Count Limit with "+" Button

As a user, I want to be prevented from incrementing the tally count beyond a certain limit
So that I do not exceed the maximum count or face any errors

Scenario: Reach maximum count limit

Given I have a tally count

And the current count is at the maximum limit of 50

When I click on the "+" button once or multiple times

Then the tally count should remain unchanged

And I should see an error message indicating the maximum limit has been reached

2. User story(ies) in Gherkin syntax for the “-” button.

1. Feature: Decrement Tally Count with “-” Button

As a user, I want to be able to decrement the tally count
So that I can adjust the count if needed

Scenario: Decrement tally count by one

Given I have a tally count

And the current count is 7

When I click on the “-” button

Then the tally count should decrease to 6

2. Feature: Decrement Tally Count with “-” Button

As a user, I want to be able to decrement the tally count
So that I can adjust the count if needed

Scenario: Decrement tally count by one

Given I have a tally count

And the current count is 6

When I click on the “-” button

Then the tally count should decrease to 5

3. Feature: Minimum Count Limit with “-” Button

As a user, I want to be prevented from decrementing the tally count below a certain limit
So that I do not go below the minimum count

Scenario: Reach minimum count limit

Given I have a tally count

And the current count is at the minimum limit of 0

When I click on the “-” button

Then the tally count should remain unchanged

And I should see an error message indicating the minimum limit has been reached

-
- These stories are in Gherkins syntax and provided 3 different scenarios. These user stories individually focus on the functionality of the “+” and “-” buttons in relation to tally count.
